

Love Bird

Agapornis

What is the history of my relationship to man?

Peach-faced Lovebirds get their name for their affection towards their owner or other birds. Lovebirds are very playful and love to have all the attention centered around them. If trained correctly, Peach-faced Lovebird will happily perch on your shoulder

Habitat / Climate

arid regions in southwestern Africa such as the Namib Desert

Where am I from?

We originate from Africa and its adjacent islands.

Who are my relatives?

There are many types of Lovebirds such as Peach faced ,Black faced ,Fishers and Gray-headed.

Other family members:

Amazon Parrot
Macaw
Cockatoo

Breeding Potential

Clutch size 4 to 6 eggs
up to two clutches per year.

How am I born?

Our Moms are well noted to tear raw materials into long strips, "twisty-tie" them onto their backs, and fly distances back to make a nest.
I am hatched from an egg. We have 4-6 eggs laid between February and April. We are dull white and measure 23.5 mm by 17.3 mm. We are incubated for about 23 days. As young birds we fledge after 43 days.

Breeding Season

How long does it take me to grow up and how long do I live

Young birds fledge after 43 days.
We can live for at least 10 to 15 years.

What kind of family life do I have?

We live in flocks and eat throughout the day and take frequent baths.

Names for:

Adult male- Male
Adult female- Female
Young- Chicks
Group:- Flocks

What do I eat and when do I eat?

.We need to be fed and watered each day.
We eat seeds and pellets, supplemented with fresh fruit, vegetables and greens.

Who are my predators?

Birds of prey and snakes

Comments:

Here at the Ranch we have several Hybrid Lovebirds
